@Abigotado

SKILLS

Flutter & Dart
BLoC, Riverpod, Elementary, Signals, go_router, auto_route, Dio, GraphQL, Hive, WebSocket, Firebase, freezed, injectable, Pigeon, Widget Testing, Unit Testing, Integration Testing

AI-First Development
Claude Code, Codex, Cursor, opencode, agent harnesses, multi-agent pipelines, agent skills & CLIs, automated PR review, prompt engineering

Backend & Web
Node.js / TypeScript (Fastify), Redis, WebSockets, Next.js / React, Java / Spring Boot, SQL (PostgreSQL, SQLite), REST API design, Kotlin/Swift (basic: reading native code, plugins via Pigeon), C++ / Go (basics)

Fintech & Crypto
payment cards, crypto exchange & trading, KYC flows, Stripe API, YuMoney, in-app payments

Mobile Security
secure storage, encrypted storage (Hive / Hive CE), biometric authentication, app lock & screen protection on backgrounding, code obfuscation, OWASP Mobile practices

Architecture & Processes
DDD, Clean Architecture, feature-first modularization, Git flow design, code review standards

Leadership
team coordination & releases, assembled & led freelance mobile teams (2-3 devs, turnkey delivery), mentoring, technical interviewing, cross-functional collaboration

DevOps & Infrastructure
Docker, CI/CD, nginx / Apache (reverse proxy, WAF), Kubernetes (basics)

LANGUAGES

Russian — Native

English — C2 (Proficient)

Spanish — C2 (Proficient)

CERTIFICATIONS

Professional Retraining Diploma - C/C++ Programming in UNIX-like OS
NRNU MEPhI (Sep 2025)

Java - short-term skills program
MEPhI Digital Center / Greenatom (Rosatom) (Dec 2024)

ABOUT

Senior Flutter engineer, 5+ years of cross-platform development (iOS, Android, Web, macOS), strong fintech and crypto background. Now work across the full stack (mobile, backend, web) and build AI infrastructure for agentic development. Designed app architecture from scratch (DDD, Clean Architecture, feature-first modularization) and set up the engineering processes around it: Git flow, CI/CD, reviews, testing with a 70-75% coverage bar. Shipped mobile security more than once: secure storage, encrypted storage, biometric auth, screen protection on backgrounding, code obfuscation. Built and led small freelance teams of 2-3 developers shipping mobile apps end to end. Experience coordinating a project team's work: task breakdown, releases, aligning mobile and backend. Mentored developers, ran technical interviews. Hands-on backend work with Node.js/TypeScript and Java/Spring Boot, web with Next.js, SQL, plus some Go and C++. Devops: Docker, nginx/Apache, reverse proxies, WAF, basic Kubernetes. Set up agent harnesses, skills and multi-agent delivery and review pipelines for teams: they cut task time by 2-3x, and AI-written code still goes through normal strict review. Author open-source CLIs for coding agents. Before tech, worked in major media and in commerce, including in management roles. Fluent English (C2) and Spanish (C2).

WORK EXPERIENCE

Flutter Developer (full-time) — Somnio Software
Feb 2026 – Present
Cross-platform development at one of the leading international Flutter consultancies, across multiple client applications.

- Coordinate the project team's day-to-day work without a formal lead title: split and route tasks, align mobile and backend changes, cut mobile releases
- Built the team's AI development toolkit: agent skills that take a ticket to a reviewed PR (analysis, implementation with tests, simulator screenshots), automated PR review against company standards, a tracker CLI
- Ship features end to end: Flutter client, Node.js/TypeScript backend, Next.js web
- Contribute to the company's open-source CLI that installs AI skills across coding agents
- Reworked stream-heavy state management and made the app ~3-5x faster and more responsive
- Reworked parts of the architecture and split the app into cleaner modules
- Run code reviews and lead refactoring efforts
- Maintain ~85% test coverage and regular code-quality checks across the team

Tech: Flutter, Dart, BLoC, go_router, Firebase, very_good_cli, Node.js, TypeScript, Fastify, Redis, AWS, WebSockets, Next.js, React

Flutter Developer (part-time, freelance) — FinHarbor
Oct 2025 – Present
Hybrid crypto + fiat fintech app (payment cards, crypto exchange, trading) in a distributed international team. 10K+ downloads across app stores.

- Built the in-app payments and card features
- Built the mobile side of the 2FA/OTP flows (integration and UI)
- Worked on the mobile side of KYC verification (Sumsub)
- Drove the app's modularization, enabling the team to build features in parallel
- Built internal Flutter plugins and packages, including native ones via Pigeon (Kotlin/Swift)
- Introduced unit testing to a previously untested codebase
- Set up structured logging that sped up debugging and incident analysis
- Review code and help set engineering standards on the team
- Use a custom AI-agent workflow day to day, with AI output held to the same review bar

Tech: Flutter, Dart, BLoC, GetIt, Injectable, Dio, talker, auto_route, Pigeon, Firebase, Cursor, Claude Code, Codex, opencode

Flutter Developer — Digital Technologies & Platforms
Sep 2024 – Feb 2026
Developed and maintained a large cross-platform mobile app. 10K+ downloads across app stores.

- Optimized performance and reduced the app's size
- Built a real-time chat on WebSocket
- One of the drivers of the team's AI adoption - from scratch to a fully AI-assisted pipeline
- Interviewed ~10 Flutter candidates; cross-reviewed code in a team of five
- Helped move the team to a new Git flow
- One of the leads on the app's modularization

Tech: Flutter, Dart, Signal, GetIt, Hive, Dio, go_router, WebSocket, Firebase (push), Cursor, Claude Code, Codex, opencode

Flutter Developer — CPI Technologies GmbH
Apr 2023 – Sep 2024
Developed cross-platform applications (iOS, Android, Web) from scratch in several domains including fintech and crypto.

- Designed app architecture from scratch (DDD, feature-first)
- Implemented Stripe API for in-app payments
- Worked on a crypto-domain application as part of the product line
- Integrated Firebase Auth, Storage, Firestore; built chats on Firestore and Matrix.org
- Integrated video streaming with LiveKit and WebRTC
- Connected a GraphQL API and optimized data exchange with the server
- Embedded native JavaScript workers in the web app for multi-threaded work

Tech: Flutter, Dart, BLoC, Provider, GetIt, Injectable, Hive, GraphQL, Dio, go_router, Firebase, Stripe API, Matrix.org API, LiveKit, WebRTC

Flutter Developer — RZD (Russian Railways)
Feb 2022 – Aug 2023
Maintained and refactored enterprise mobile apps for Russian Railways (an 850K-employee company), used by thousands of employees, and built new apps from scratch.

- Migrated the app to Clean Architecture
- Introduced testing with a 70-75% coverage bar where none existed
- Integrated YuMoney payments
- Moved the codebase to null safety and cleaned out legacy code
- Added push notifications, deep links and WebSocket real-time features
- Mentored a Flutter developer, did code reviews

Tech: Flutter, Dart, Riverpod, BLoC, Provider, GetIt, Hive, Dio, go_router, Firebase (push)

Flutter Developer — Nyamee (ARI, OOO)
Apr 2021 – Feb 2022
Developed and maintained cross-platform mobile applications using Flutter.

- Implemented complex UI components and animations using Flutter Canvas
- Integrated deep linking and push notifications
- Migrated to Navigator 2.0

Tech: Flutter, Dart, BLoC, GetX, Routemaster, Beamer, Dio, WebSocket, Firebase

EDUCATION

Master's in Software Engineering — National Research Nuclear University MEPhI
Sep 2024 – Jun 2026
IICS, Software Engineering · GPA 5.0/5.0, diploma with honors

Bachelor's in Economics — Moscow State Institute of International Relations (MGIMO)
Sep 2006 – Jun 2010
Faculty of International Economic Relations, Finance and Credit

PORTFOLIO
